Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	<i>Describe customer who is a key characteristics – who are they?</i>	I am a Government Policymaker / Agricultural Researcher / Farmer. I am responsible for planning agricultural policies, conducting research, or making informed farming decisions.
I'm trying to	<i>List their outcome or "job" the user wants – what are they trying to achieve?</i>	I'm trying to analyze 25 years of agricultural crop production data to understand trends, compare performance across states and crops, and make data-driven decisions.
but	<i>Describe what problems or barriers stand in the way – what blocks them now?</i>	but the data is large, scattered across years, and recorded in different units (Tonnes, Bales, Nuts). It is difficult to clean, combine, and analyze without a proper tool, leading to time-consuming manual work and inconsistent insights.
because	<i>Enter the "root cause" of why the problems or barriers exist – what needs to be solved?</i>	because there is no interactive dashboard that integrates cleaned data and presents key metrics visually. Lack of centralized analysis makes it hard to identify patterns, compare regions, and track yield performance.
which makes me feel	<i>Describe the emotions from the customer's point of view – how does it make them emotionally?</i>	which makes me feel frustrated and uncertain about decision-making. I feel overwhelmed by data, worried about missing important insights, and less confident in planning effective policies or strategies.

Scenario 1 Small-Scale Farmer 	I am  a small-scale farmer in Uttar Pradesh.	I'm trying to  maximize my crop yield and income by choosing the right crops each season.	But  I struggle to decide which crops to grow due to changing weather patterns and market demand.	Because  I don't have easy access to historical data insights on crop trends, regional productivity, and high-performing crops.	Which makes me feel  uncertain and worried about low yield, reduced income, and the risk of making wrong decisions.
Scenario 2 Government Policy Analyst 	 a policy analyst at the Ministry of Agriculture.	 design policies to improve agricultural productivity across India.	 it is difficult to identify regions with low crop yield and understand long-term production trends and seasonal variations.	 data is scattered, complex, and not presented in a way that reveals patterns easily for analysis.	 pressured to make accurate decisions and concerned about ineffective resource allocation.
Scenario 3 Agribusiness Investor 	 an agribusiness investor.	 invest in high-growth agricultural sectors by identifying profitable crops and growing regions.	 it is challenging to find emerging trends and regions with consistent growth over time.	 raw data is hard to analyze and compare across years, crops, and regions without visual insights.	 cautious and hesitant about investments, fearing high risk and low returns.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Working Professional	maintain a healthy diet and track my daily calorie and nutrient intake	I end up manually cross-checking food values across multiple websites and still get inconsistent numbers	there is no single platform that calculates my BMI, tracks my nutrition, and recommends meals based on my goals	discouraged and likely to abandon my health goals altogether
PS-2	A Fitness Enthusiast	follow a diet plan that matches my calorie and macro requirements for weight loss or muscle gain	generic diet charts don't account for my personal BMI, activity level, or food preferences	I lack access to an AI-powered system that gives personalized meal recommendations and tracks my daily progress	frustrated and unsure whether I'm actually progressing toward my fitness goals
